Organization View.

Our company. Started as one of the first People Analytics practices before focussing on employee text-analytics in 2015

www.organizationview.com

Workometry.

By OrganizationView

Our product. Addresses the need to understand employee perception data provided as multi-lingual text. Now the main part of our business

www.workometry.com

Alternatively structured data

NOT

Unstructured data

Finding meaningful themes

We aim to highlight meaningful **themes** that increase understanding. We use an **inductive** approach, learning from your data. Our algorithms even learn your business-specific jargon and terminology. The theme labels should be themselves reasonable answers to the question.

(Humans + Algorithms)

>

(Humans OR Algorithms)

Flexibility to ask any question

“How can we improve customer experience in our stores?”

“What could we do to improve the performance review process?”

“What could we do to improve your working life here?”

“What ideas do you have to improve the Christmas sales period?”

“How could HR improve the services they provide you as a manager?”

“What can we do to enable more women to move into leadership positions?”

Example 1: Reasons for loss in productivity

A probabilistic co-occurrence network using community detection to identify which themes employees are most likely to talk about together.

Technologies / Processes have been removed to protect client confidentiality

Example 2: Reducing employee & customer frustrations

From...

in the next survey

...To

“Change the music. It’s so moody and depressing and totally not our customer. We have had several complaints from customers and the team”

“Since the last survey, they have changed the music and it creates a better work place for staff and customers”

Why we're different

9

Proprietary text algorithms

We code at the Organization & Question level which gives us **unparalleled model accuracy** and the ability to understand any question in any language.

Deep training data

Working with very large organizations has given us a **deep domain-specific dataset** which enables us to outperform models trained on enormous but general training data used by most firms.

Flexible approach

As we always tailor models for our clients, we have **tremendous opportunity to adapt deliverables** to individual requirements.
